

DESERTECH
AI SOLUTIONS

WHERE DESERT MEETS INTELLIGENCE

AI, software, cloud and digital transformation services governed through one accountable UAE delivery structure.

PUBLIC COMPANY PROFILE • 2026

COMPANY OVERVIEW

One accountable technology partner

Desertech AI Solutions helps organisations shape, deliver and govern digital initiatives across artificial intelligence, software, web, cloud, networks and project delivery. We act as the prime contractor and single point of accountability, while specialist delivery capacity may be engaged under approved partner governance where a scope requires it.

Local accountability

UAE-based commercial ownership, client communication, scope control and delivery governance.

Specialist delivery

Capability is assembled around the approved scope, required outcomes and operating constraints.

Governed execution

Defined milestones, review gates, responsibilities, risks and acceptance criteria.

Outcome focus

Solutions are designed around measurable operational value—not technology for its own sake.

OUR POSITIONING

Prime contractor • governance-led delivery • specialist capability • clear service boundaries

Service boundary: Desertech AI Solutions provides technology and project services. It does not present recruitment, manpower supply or employee placement as part of this profile.

Eight licensed service areas

Our public offering is organised around the following technology and delivery activities.

01 Systems & Software Design

Architecture, requirements, solution design, application engineering and integration planning.

02 AI Development Services

AI-enabled applications, assistants, automation and decision-support solutions.

03 Innovation & AI Advisory

Use-case discovery, feasibility studies, roadmaps and responsible adoption planning.

04 IT Consultancy

Technology assessments, operating-model advice, digital roadmaps and solution assurance.

05 Website Design

Corporate sites, service portals, web applications and user-experience design.

06 Cloud Services

Cloud planning, migration support, platform modernisation and managed cloud operations.

07 Network Management

Network monitoring, administration, optimisation and operational support.

08 Project Management

Planning, governance, risk control, vendor coordination and delivery oversight.

Final scope, staffing model, service levels, hosting and security controls are confirmed for each engagement through the applicable proposal and contract.

REPRESENTATIVE SOLUTIONS

Use cases we are structured to deliver

The examples below illustrate solution patterns aligned with our services. They are representative concepts—not claims of named client work.

AI Knowledge Assistant

Secure retrieval and guided answers across approved organisational documents and policies.

Arabic Service Assistant

Bilingual digital support for customer or citizen journeys, FAQs and service guidance.

Document Intelligence

Classification, extraction, validation and workflow routing for high-volume documents.

Workflow Automation

Digitised approvals, notifications, task routing and operational dashboards.

Web Service Portal

Responsive portals for information, applications, requests and status tracking.

Systems Integration

API-led integration between business applications, portals and data sources.

Data & BI Dashboard

Trusted metrics, performance views and operational reporting for decision makers.

Cloud Modernisation

Workload assessment, migration planning, platform improvement and managed support.

SECTOR FOCUS

Designed to adapt to government and public services, education, healthcare, financial services, retail and e-commerce, logistics and operational environments—subject to sector requirements and procurement conditions.

DELIVERY MODEL

From discovery to controlled operation

A clear lifecycle keeps scope, accountability and acceptance visible throughout the engagement.

01	Discover Objectives, users, constraints and success measures.
02	Define Scope, architecture, plan, roles and acceptance criteria.
03	Design Experience, solution, controls and delivery backlog.
04	Deliver Build, configure, integrate and document.
05	Assure Test, review, train and obtain formal acceptance.
06	Operate Support, monitor, improve and report where contracted.

ENGAGEMENT OPTIONS

Project delivery

Defined outputs, milestones and acceptance criteria.

Advisory engagement

Assessment, roadmap, architecture or assurance support.

Managed service

Ongoing operation against contracted scope and service levels.

Partner-supported delivery

Approved specialists coordinated under Desertech governance.

A clearer path from RFP to delivery

We structure proposals to help procurement and technical evaluators understand scope, responsibilities, risks, governance and commercial assumptions.

Requirements matrix

Traceability from RFP requirements to the proposed response and evidence.

Delivery plan

Milestones, dependencies, responsibilities and acceptance gates.

Governance model

Reporting rhythm, decision rights, risk and change control.

Commercial clarity

Scope assumptions, exclusions, pricing basis and optional services.

START A CONVERSATION

Share your objective or RFP

We will review the requirement, confirm fit and propose the appropriate next step.
